DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-66 and 70-74, drawn to a method for determining a systemic property of a biochemical reaction network and computer readable media, classified in class 703, subclass 11.
- II. Claim 67, drawn to a method for determining a phenotype of a mutant of an organism by identifying a reaction that is not naturally present in an organism, classified in class 702, subclass 19.
- III. Claim 68, drawn to a method for determining a phenotype of a mutant of an organism by identifying a reaction that is related to an open reading frame or protein in a gene database, classified in class 702, subclass 19.
- IV. Claim 69, drawn to a method for determining the effect of a drug on the activity of one or more reactions in a biochemical reaction network, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

The methods of Groups I-IV can be shown to be distinct as they have different method steps and goals.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification as well as the necessity for

non-coextensive non-patent literature searches, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
